

QQboxx : After launching QQboxx, the LightScribe Print icon does not appear in the toolbar.

There could be several reasons for this.

Reason 1: The RW-drive installed in the Duplicator may be a non LightScribe RW-drive.

Recommendation 1: Determine whether the RW-drive is a LightScribe RW-drive:

- a. Check the serialnumber of the product
- b. Check the Shipping records
- c. Check the Log files

Â

Â

Reason 2: The LightScribe System Software (LSS) and / or the LightScribe Windows Public Software Development Kit (SDK) were not properly installed during the software installation.

Recommendation 2: Determine whether the LSS and SDK has been installed properly.

- 1. Check the installed LSS and SDK by going to [Start] --> [Program] to see if it is installed properly.
- 2. Go to [Settings] --> [Control Panel] --> [Add or Remove Programs] ; check if LSS and SDK are installed properly.

Unique solution ID: #1000

QQboxx : After launching QQboxx, the LightScribe Print icon does not appear in the toolbar.
