Xymba USB DiscFlip: Initialization fails after launching the software but the unit is turned on.

Reason 1:

Problem with the USB connection between PC and the unit.

Recommendation 1:

- 1. Check USB connection
- 2. Change USB cable
- 3. Check if USB slot is USB 2.0 Hi-Speed spec

Â

Reason 2:

SATA USB bridge board is defected.

Recommendation 2:

- 1. Turn on the devide manager to see if the disc autoloader and the USB RW drive are online. If not, there is a problem with the USB connection. Check if the USB cable, USB slot of the unit and PC's USB slot are functioniong.
- 2. Turn on the devide manager to see if the disc autoloader and the USB RW drive are on-line. If the autoloader is online but the RW drive isn't, reboot the PC and the unit and try again.
- 3. If the problem still exist after several try-outs, contact your supplier.
