

## *Software: What should I do if I do not want to burn certain files within the monitoring folder?*

### **Recommendation:**

You may move the files out of the monitoring folder. Or, create a sub-folder to "hide" the files.

Or, go to QQcatcher Main Menu window and press the "Pause Monitoring" button to temporarily pause QQcatcher monitoring. Then, go to **File -> Preferences -> Folder** to check the "Ignore files existing in the monitoring folder". Press the "Pause Monitoring" button again will resume QQcatcher monitoring.

Alternatively, you may close QQcatcher and go to the Queue folder (under QQcatcher installation folder) and delete the files that you do not want to burn.
